Skills

Javascript, HTML, CSS, AngularJS, React, Node, SQL, jQuery, Github

My Projects

- GoPro website-clone

I built this clone using angularjs with a nodejs back-end and an elephantSQL database. My clone includes the home page, shop page, and apps page. When you add items to your cart in the shop, you can click on the cart and review, update, and checkout. You can see it at http://158.69.122.70:3000/.

- Amazon website-clone

I built this in react as a group project. We chose to use react to challenge ourselves with a new framework. This clone was aimed at cloning the aesthetic and functional aspects of amazon.com. Being such a large site, we set out to complete the homepage, product-view, cart-view, login, and checkout.You can see it at https://amazon-clone-us.herokuapp.com/#/

- UT Pokéalerts

One of my first projects is currently running with 600 very active users. It uses 1,400 Pokémon Go accounts to walk around Orem, Utah and and report rare spawns to Slack where users can click on what they want to catch and a map will tell them where to go. You can see a live view of pokemon at http://158.69.122.70:5001/ or you can join the Slack team to get live alerts on rare pokemon by using this link https://utpokealerts-South.slack.com/

Education

DevMountain Provo,UT Jan 2017 - Apr 2017

Experience

Nestle 2010-2017 I worked on the production floor making ingredients to be sent to the production lines. My focus was on safety. I ensured that other employees were working safely and made sure that their work environment was safe to work in.

About Me

I am a father of a 5 year old boy and a 2 year old girl. I can fix anything. I also love to build things. I fell in love with coding because it gives me the ability to build anything I want without having to spend hundreds of thousands of dollars on machinery. All I need is my text editor. I work very well with others and I can get things done on my own.
